

Which study form should I build?

Start with the reader's task. Follow a choice by its ID and generated page. Unknown routes ask for missing information before a conditional return; method leaves can require a shared review step.

choose-goal: What is the reader trying to do? (p. 1)

choose-goal: What is the reader trying to do?

A. Understand an idea.

make-notes: Build explanatory notes (p. 1)

B. Find something from a remembered word or task.

choose-lookup: Does the reader need a compact answer or locations? (p. 1)

C. Choose a method from known conditions.

make-tree: Build a question-to-method tree (p. 2)

?. Unknown / insufficient information

clarify-goal: Ask for one real reader task (p. 2)

choose-lookup: Does the reader need a compact answer or locations?

A. A compact answer with direct lookup routes.

make-quick: Build the unified Quick Reference (p. 1)

B. Only compact locations.

make-index: Build the optional Keyword Index (p. 1)

?. Unknown / insufficient information

clarify-lookup: Try one remembered-word lookup (p. 2)

make-notes: Build explanatory notes

Map the authorized source, explain the concept and show a worked application. Retain conditions and mark gaps. Select notes in the build; use the shared paragraph-flow option for long prose.

Required next step: Check the explanation and output.

review-set: Review, then deliver selected forms (p. 2)

make-quick: Build the unified Quick Reference

Declare canonical entries and direct aliases/keyword targets in one registry. Group deliberate headword matches, preserve distinct senses and generate target pages. Select quick-reference; notes can be included when requested.

Required next step: Try realistic remembered-word lookups.

review-set: Review, then deliver selected forms (p. 2)

make-index: Build the optional Keyword Index

Use the same registry in compact mode. Keep canonical and subentry destinations. Select keyword-index only when the reader wants this separate pointer view; do not make it a second mandatory lookup location.

应当制作哪种学习资料?

从读者的任务出发, 按选项中的编号与自动页码继续。未知路径先询问缺失信息, 再有条件地返回; 方法叶节点可以要求继续执行共同的复核步骤。

choose-goal: 读者想完成什么? (第1页)

choose-goal: 读者想完成什么?

A. 理解一个概念。

make-notes: 制作解释性笔记 (第1页)

B. 根据记得的词语或任务查找内容。

choose-lookup: 读者需要简明答案, 还是定位信息? (第1页)

C. 根据已知条件选择方法。

make-tree: 制作问题到方法的决策树 (第2页)

?. 未知/信息不足

clarify-goal: 询问一个真实阅读任务 (第2页)

choose-lookup: 读者需要简明答案, 还是定位信息?

A. 带直接检索路径的简明答案。

make-quick: 制作统一速查 (第1页)

B. 只要紧凑的定位信息。

make-index: 制作可选关键词索引 (第1页)

?. 未知/信息不足

clarify-lookup: 试一次记忆词检索 (第2页)

make-notes: 制作解释性笔记

映射获准使用的来源, 解释概念并展示具体应用。保留条件并标记缺口。构建时选择 notes; 长正文使用公共段落跨页选项。

必须继续的步骤: 检查解释与产物。

review-set: 复核后交付所选资料 (第2页)

make-quick: 制作统一速查

在同一份记录中声明规范条目, 以及直接的别名/关键词目标。合并明确属于同一词头的内容, 保留不同含义, 并生成目标页码。选择 quick-reference; 需要时可同时包含笔记。

必须继续的步骤: 测试真实的记忆词检索。

review-set: 复核后交付所选资料 (第2页)

make-index: 制作可选关键词索引

以紧凑模式使用同一份记录, 保留概念和子条目目标。只有读者需要独立定位视图时才选择 keyword-index, 不要让它成为第二个必须查找的位置。

Required next step: Verify every pointer.

review-set: Review, then deliver selected forms (p. 2)

make-tree: Build a question-to-method tree

Ask about observable conditions. Add alternatives, explicit unknown routes and useful method leaves. Mark conditional clarification returns and required continuations separately. Select decision-tree and test each path.

Required next step: Exercise choices and return conditions.

review-set: Review, then deliver selected forms (p. 2)

clarify-goal: Ask for one real reader task

Ask the reader to give an example of what they will try to understand, find or decide. Obtain that example before returning to the first question; do not guess the required form.

After obtaining the missing information, return to **choose-goal**: What is the reader trying to do? (p. 1)

clarify-lookup: Try one remembered-word lookup

Ask what the reader expects after finding the word: a concise explanation, or only a location. Use that answer to return to the lookup question.

After obtaining the missing information, return to **choose-lookup**: Does the reader need a compact answer or locations? (p. 1)

review-set: Review, then deliver selected forms

Check source coverage, explanations, real lookup targets and decision paths separately. Inspect every final PDF page and its links. Deliver only selected forms with the source map and portable native project. Report any remaining limitations.

必须继续的步骤: 核对所有定位。

review-set: 复核后交付所选资料 (第2页)

make-tree: 制作问题到方法的决策树

询问可观察条件, 添加不同选项、明确的未知路径和有用的方法叶节点。分别标记有条件的澄清返回与必需后续步骤。选择 decision-tree, 并测试每条路径。

必须继续的步骤: 走通选项并核对返回条件。

review-set: 复核后交付所选资料 (第2页)

clarify-goal: 询问一个真实阅读任务

请读者举例说明将尝试理解、查找或决定什么。取得这个例子后再返回第一个问题, 不要猜测所需形式。

取得缺失信息后返回 **choose-goal**: 读者想完成什么? (第1页)

clarify-lookup: 试一次记忆词检索

询问读者找到这个词之后期待看到什么: 简明解释, 还是仅仅一个位置? 根据回答返回检索问题。

取得缺失信息后返回 **choose-lookup**: 读者需要简明答案, 还是定位信息? (第1页)

review-set: 复核后交付所选资料

分别检查来源覆盖、解释、真实检索目标和决策路径。查看全部最终 PDF 页面及其链接。只交付所选形式, 并附来源映射和可移植原生项目。说明仍然存在的限制。
